

ESPRESSO EQUIPMENT, SERVICE AND EXPERTISE

LA MARZOCCO SWIFT GRINDERS

Handcrafted in La Marzocco's tradition, the Swift grinder improves overall beverage quality and increases both speed and consistency of delivery. Featuring dual hoppers and grinders and consistent dosing by volume, the Swift also grinds, doses, and tamps automatically—all at the touch of one button. These features increase the amount of throughput that can be achieved while simultaneously reducing coffee waste and saving counter space. In 2000, the Swift Grinder won the Best New Product Award at both the Specialty Coffee Association of America and the Coffee Fest Seattle tradeshow. La Marzocco Swift grinders make it easier to maintain high standards of espresso quality.

ABOUT THE SWIFT GRINDER:

- **One-step Dosing, Grinding, and Tamping.** By engaging the portafilter and pressing one button, the grinder measures, doses, and tamps a double shot in about six seconds. This ensures consistency, cuts down on waste, improves quality, and increases throughput.
- **One Step Adjustments.** Adjusting the grind is possible with the turn of a knob and allows for greater control as the barista can vary the pour speed in response to fluctuations in conditions, including changes in barometric pressure.
- **Dual Hoppers and Grinders.** Featuring two separate grinder heads in a single machine allows the barista to choose between different roasts, or between decaf and regular, without switching grinders.
- **State-of-the-art Ceramic Burrs.** Instead of the typical steel grinder burrs, ceramic burrs are used and outlast their steel counterparts three to one.
- **Comprehensive Owners Manual.** Each customer receives an illustrated manual that provides all machine details. This allows end users to fully understand and optimally utilize their Swift.
- **Standard or Customized Colors.** The grinders are available in Red or Black, or customers can opt for a custom color to match their other equipment and décor.
- **NSF, UL Approvals.** Saving you time during the inspection process, all necessary documentation and certifications required to operate the machine is provided up front.

SUPPORTING YOUR LA MARZOCCO GRINDER

ESI offers our comprehensive support program that covers all aspects of machine maintenance, from troubleshooting specific performance problems to rapid parts order and delivery. We provide the expertise and knowledge to ensure that every espresso machine and grinder we sell operates successfully and consistently—producing better-tasting coffee, increasing productivity, and boosting beverage sales.
